

EXO5 Enterprise Console

The enterprise
management console
for Avira Antivirus

Management Features:

- Silently install/update the Avira client to endpoints, on-demand or automatically via policy
- Group and policy management enables large-scale deployments
- Modern web UI includes complete endpoint inventory and system dashboard
- Alerts can be e-mailed or imported into SIEM and other databases via RSS feed
- Customizable and exportable reports improve decision making and provide proof-of-compliance

EXO5 Enterprise Console – Avira Antivirus Edition is free to use for new customers and those renewing existing licenses. Users can upgrade to EXO5 Anti-theft and Encryption Suite for an additional per-device subscription fee.

Easy installation and fast configuration:

- Track and geolocate endpoints in real-time
- Protect sensitive data with RemoteKill® emergency encryption, hard drive lockout and full disk encryption PIN revocation
- Deploy and manage full disk encryption (Windows Bitlocker and MacOS Filevault). Centrally manage recovery keys and DRA certificates.
- Protect iOS and Android devices with MDM security features

Deploy Avira Antivirus to your entire organization with a powerful cloud-based management console. Operate

seamlessly inside and outside the corporate firewall to ensure that no endpoint goes unprotected. Access essential tracking, anti-theft and full disk encryption features to fully protect your enterprise laptop fleet.

i

EXO5 is everything businesses need to run a more secure laptop and mobile fleet. Track endpoints in real-time, counteract theft, secure sensitive data, and stay compliant with data privacy standards. All with a single cloud-based console.

- Version 2.2 or later
- 2 MB of free disk space

iOS:

- Version 7.1
- 2 MB of free disk space

Founded in 2006, EXO5 was born in the cloud and it shows. Our unique client-to-cloud platform can connect and manage millions of devices while providing real-time control of those endpoints, all from a responsive, cloud-native console. Today's mobile enterprise operates equally inside and outside the corporate firewall – we believe cloud is the best way to meet this challenge.

From its inception, EXO5 has only served the enterprise market. Our products are optimized for mass deployment and enterprise-wide management, and address the unique security challenges enterprises face. This also means we protect our customers from questionable consumer-level approaches to security (such as webcam snooping and keystroke logging), which can expose enterprises to employee privacy issues. We not only make products that IT organizations love, we make products that employees are happy and comfortable to be governed by.

EXO5 is headquartered in San Francisco, with regionally operated points-of-presence in the United States, United Kingdom, and Germany, serving over 500 enterprise customers worldwide.
